

The webcast will start in a few minutes....

LifeLongJoints

LARGE CLINICAL DATASET FOR ASSESSMENT OF JOINT REPLACEMENTS.

Grant agreement
no. NMP-310477

Outline

- Short introduction to the AnyBody Modeling System.
- Background on LifeLongJoints
- Large data set for functional assessments of total hip replacement patients
- Questions and answers

Professor Richard M. Hall
LifeLongJoints coordinator
School of Mechanical Engineering
Leeds University.

Post.Doc. David Lunn
Leeds NIHR Biomedical Research Centre
Leeds Teaching Hospitals NHS Trust

Host:
Morten Enemark Lund
R&D Engineer
AnyBody Technology

Control Panel

The Control Panel appears on the right side of your screen.

Submit questions and comments via the Questions panel.

Questions will be addressed at the end of the presentation. If your question is not addressed we will do so by email.

Expand/Collapse the Control Panel

Ask a question during the presentation

Musculoskeletal Simulation

Motion data
Kinematics + Forces

Body Loads

- Joint moments
- Muscle forces
- Joint reaction forces

Movement
Analysis

Product Design
Optimization

Ergonomic
Analysis

ANYBODY Modeling System

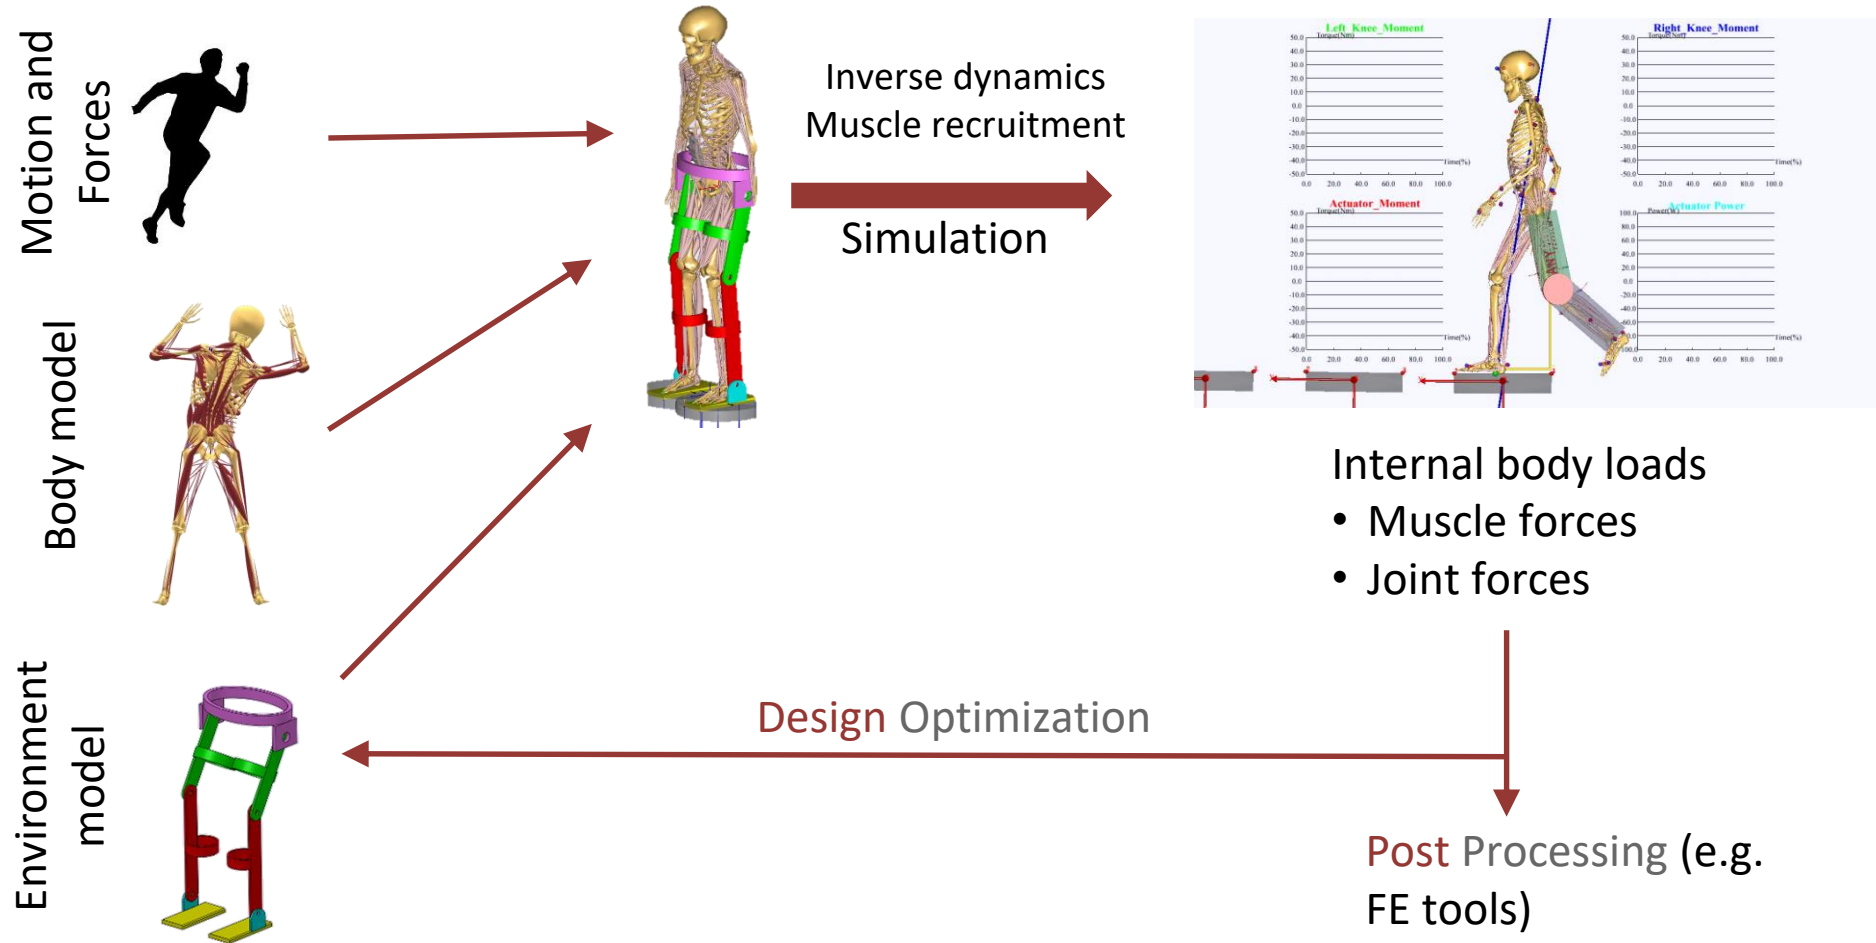

Load Cases for
Finite Element
Analysis

Surgical Planning and
Outcome Evaluation

LONG
JOINTS

Background on LifeLongJoints

- Functional Outcomes of hip arthroplasty
- Implant testing from ADLs
- Public release of the dataset

Post.Doc. David Lunn
Leeds NIHR Biomedical Research Centre
Leeds Teaching Hospitals NHS Trust

Large dataset for functional assessment of
total hip replacement patients

Dr David Lunn & Prof Anthony Redmond
Leeds Teaching Hospital NHS Trust

Overview

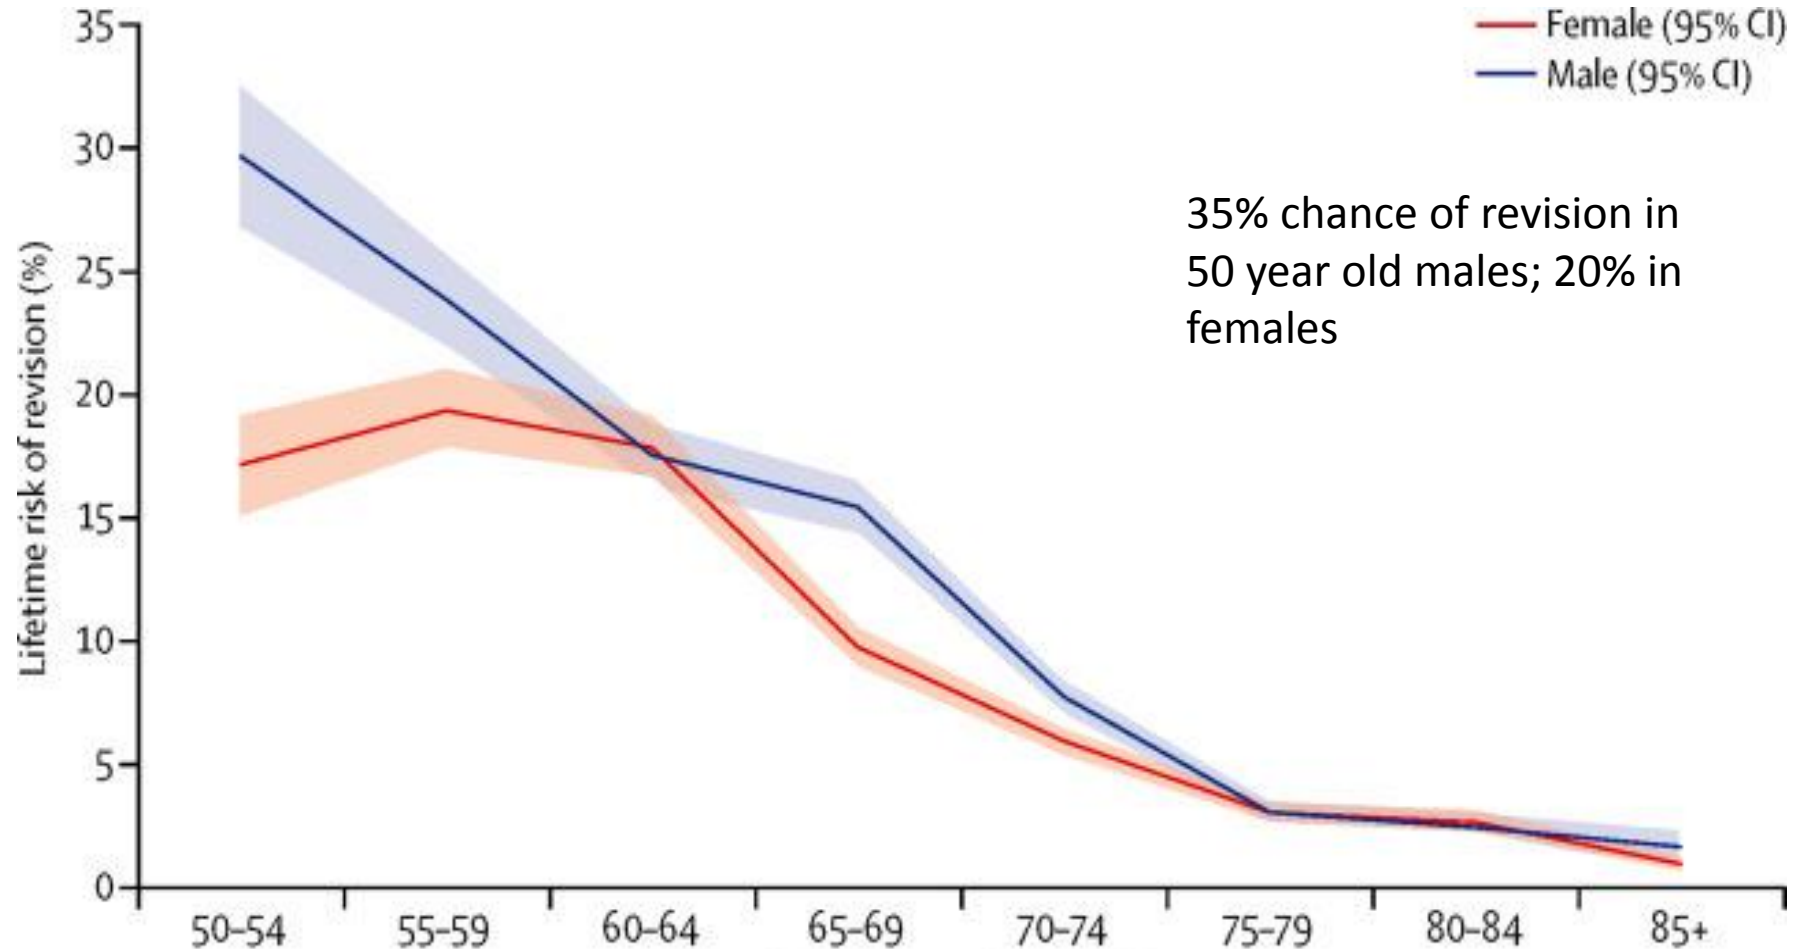

- Introduction
- Data collection
- Patient stratification results
- Joint contact forces
- Pre clinical testing- waveform development
- Future plans for the data

THR & Revision Rates

- 93,234 primary total hip replacements took place in the UK (National Joint Registry, 2016)
- THR revision rates at 4.4% at 10 years and a 20 year revision rate of 15%
- The majority of failures will be due to the wear
- Revision rates are linked with patient characteristics

THR & Revision Rates

Bayliss LE, Culliford D, Monk AP, Glyn-Jones S, Prieto-Alhambra D, Judge A, et al. The effect of patient age at intervention on risk of implant revision after total replacement of the hip or knee: a population-based cohort study. *The Lancet*.389:1424-30.

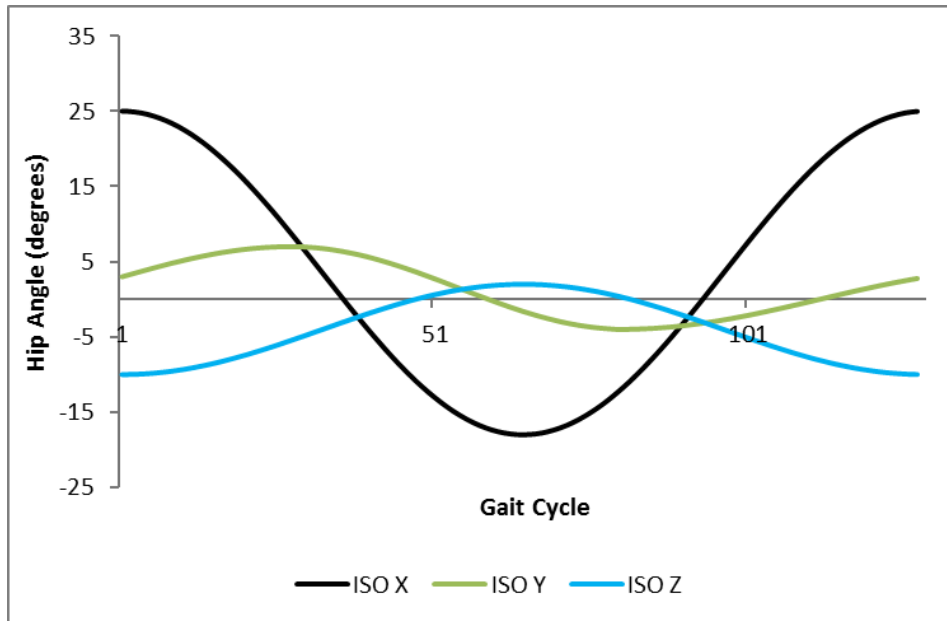

Revision Rates

Culliford D, Maskell J, Judge A, Arden NK. A population-based survival analysis describing the association of body mass index on time to revision for total hip and knee replacements: results from the UK general practice research database. *BMJ Open*. 2013;3.

Current Preclinical Testing

ISO 14242

- 3 KN axial force
- Only walking
- 5 million cycles= 45mins walking/ day for 1.5 years
- Not THR patients

PARAMETER		MAXIMUM	MINIMUM	AVERAGE	Average
SUBJECT'S	HEIGHT - IN.	72.5	62.5	68.2	5ft 6in
	WEIGHT- LB.	180	127	140.7	10st 5lbs
	AGE - YR.	36.9	18.5	21.6	21.6 years

Paul (1967)

Improving Preclinical Testing

Preclinical testing should be-

- Patient specific
 - Movement and loads
- Patient relevant
 - Activities of daily living

Our Task- Develop new more representative waveforms which could be used for preclinical testing.

Leeds NIHR Biomedical Research Centre

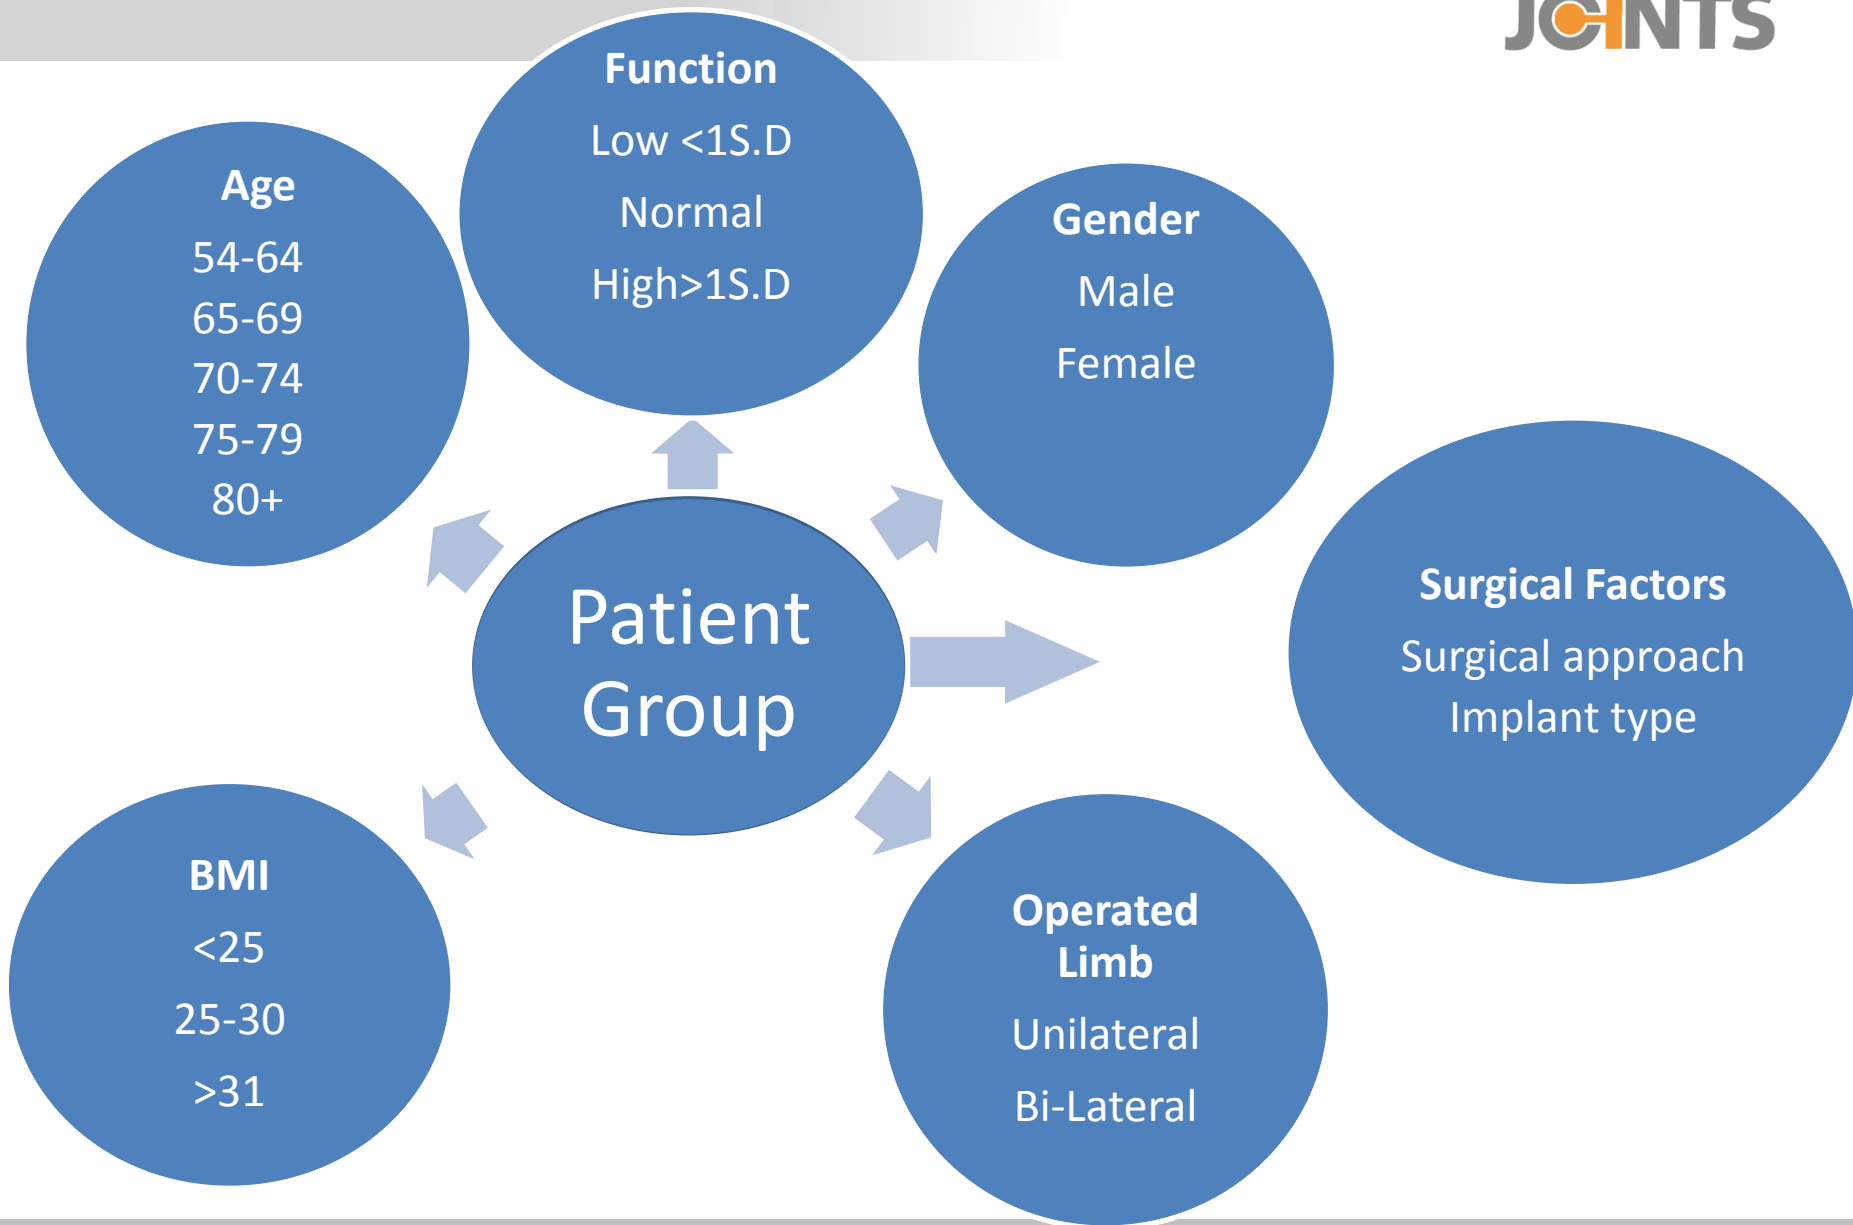

- Large numbers to explore patient characteristics
 - 1300 patients contacted –Clinical database
 - All THR between 1-5 years
 - No other joint replacements
 - No pain

Patients Recruited

Number	Gender	BMI	Age (years)
137 THR patients	70 (Male) 67(Female)	28.1 (3.9)	71.1 (9.6)

Stratification

Data Collection

Gait Laboratory

- 10 camera Vicon system
- 2 AMTI force plates
- Force plate mounted stairs
- CAST marker set
- 6 upper body markers

Activities of Daily Living

Collected Data

ADL's	Patients Collected
Walk	137
Fast	120
Sit to Stand	120
Stairs	112
Lunge	45
Squat	41
Foot on Bench	60
Jog	3
Jump	2

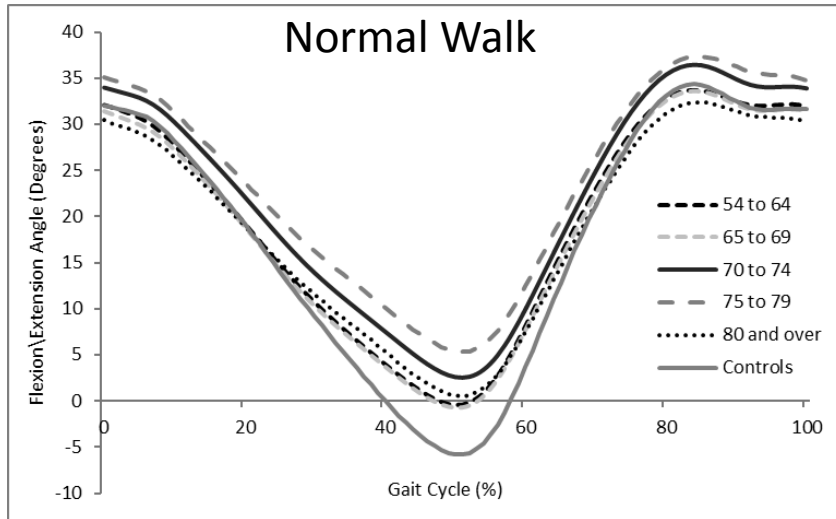

Patient Stratification

- Age- 54 to 64; 65 to 69; 70 to 74 years; 75 to 79;80 and over
- Function- low function; normal function and high function

Gait compared under normal and fast walking conditions

Age Strata

Older patients

- Gait speed,
- Peak abduction moment
- Reduced peak extension

In fast walking differences were less clear

Better indicator of function?

Low Function Group (LF)

- $-1\text{SD} (\geq 0.93 \text{ m.s}^{-1})$
- N=19 (6male)
- Age 77.0 ± 5.9 years
- BMI- 28.3 ± 4.8

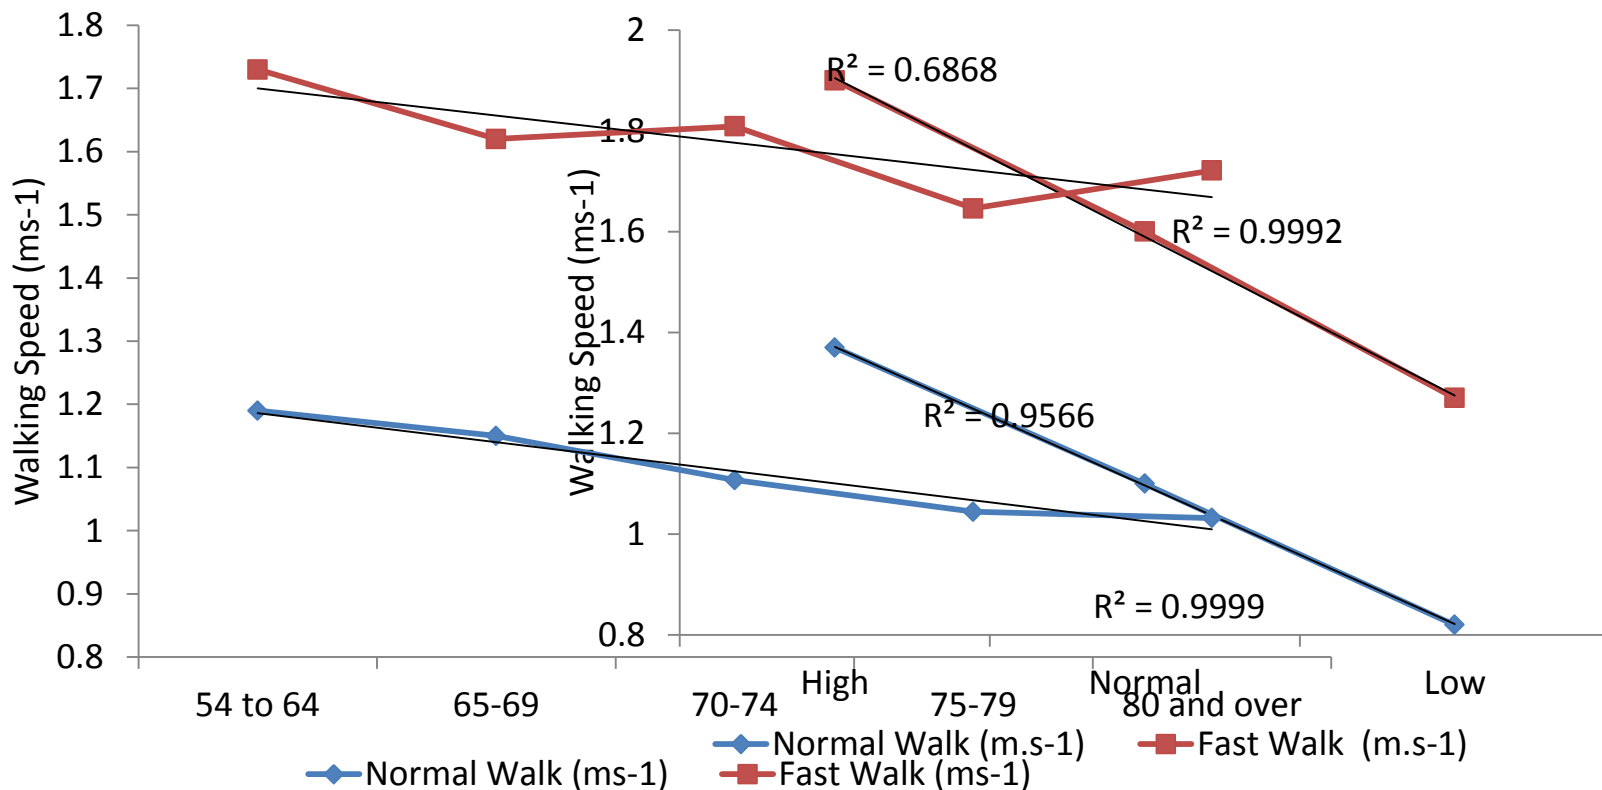

High Function Group (HF)

- $+1\text{SD} (\geq 1.26 \text{ m.s}^{-1})$
- N=19 (10male)
- Age- 68.7 ± 6.7 years,
- BMI- 27.3 ± 3.0

Healthy Control Group (CG)

- N=27 (5male)
- Age- 71.2 ± 6.9 years,
- BMI- 25.63 ± 4.2

Age & Function Results

- Walking speed for the HF group was 1.4 ms⁻¹ (95% CI 1.34 to 1.42) compared to 0.8ms⁻¹ (CI 0.78 to 0.85) in the LF group

Lunn et al , (ISTA, 2017)

Function Walk and Fast Walk

Normal Walk

Fast Walk

- Low function group lower in most joint kinematic and kinetic variables
- Low functioning patients demonstrated a systematically reduced GRF which were reflected in the hip moments

- Age is not a consistent indicator of true function
- Stratifying by gait speed is a better indicator of function
- Stratifying patients is useful to identify heterogeneity within patients.

Joint Contact Force

ANYBODY
TECHNOLOGY

Activities of Daily Living

627- Walking Trials

504- Fast walking

406- Sit to stand

406- Stand to sit

243- Stair ascent

221- Stair descent

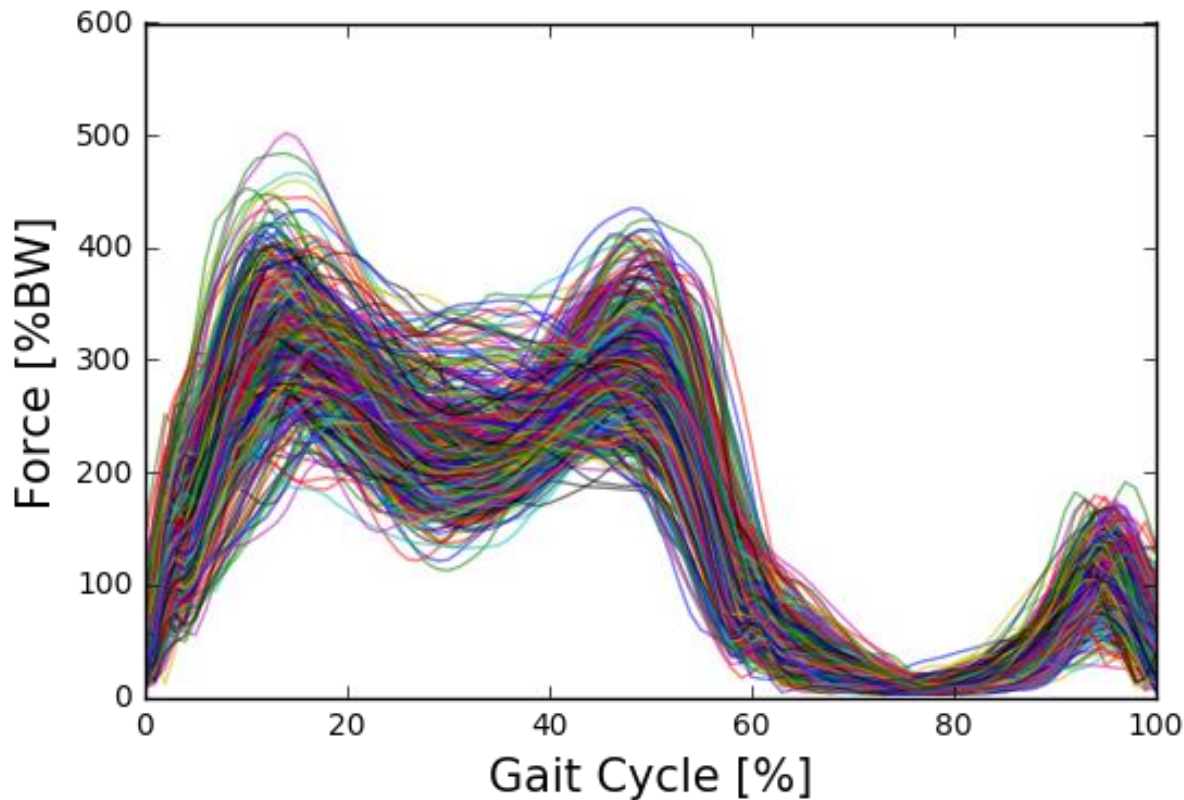

206- Squat

121- Lunge

3- Jogs

Joint Contact Force

627- Walking Trials

504- Fast walking

406- Sit to stand

406- Stand to sit

243- Stair ascent

221- Stair descent

206- Squat

121- Lunge

3- Jogs

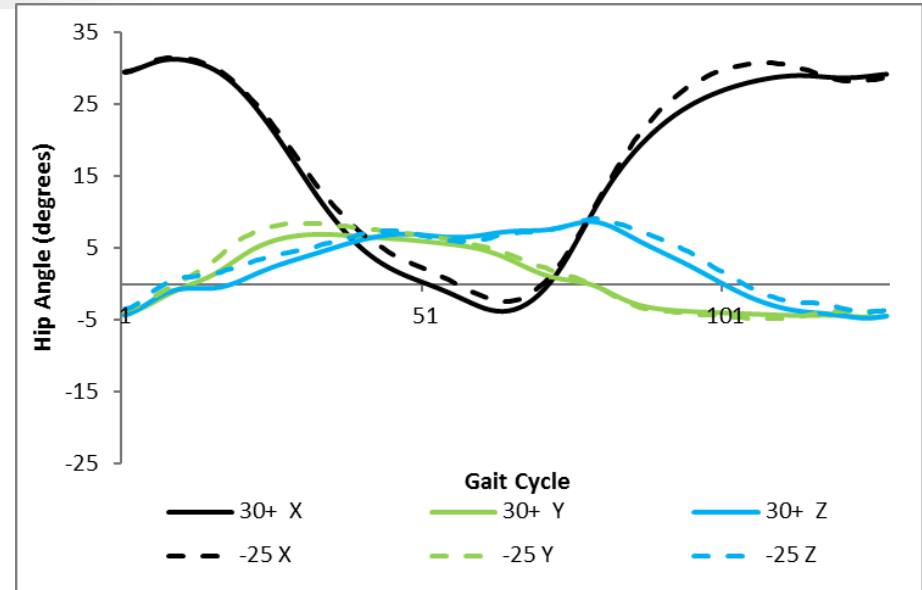

- **BMI-** Low versus high- Healthy(<25) versus Obese (>30)
- **Patient Function-** Low versus high functioning

Wear Testing- BMI

Wear Testing- BMI

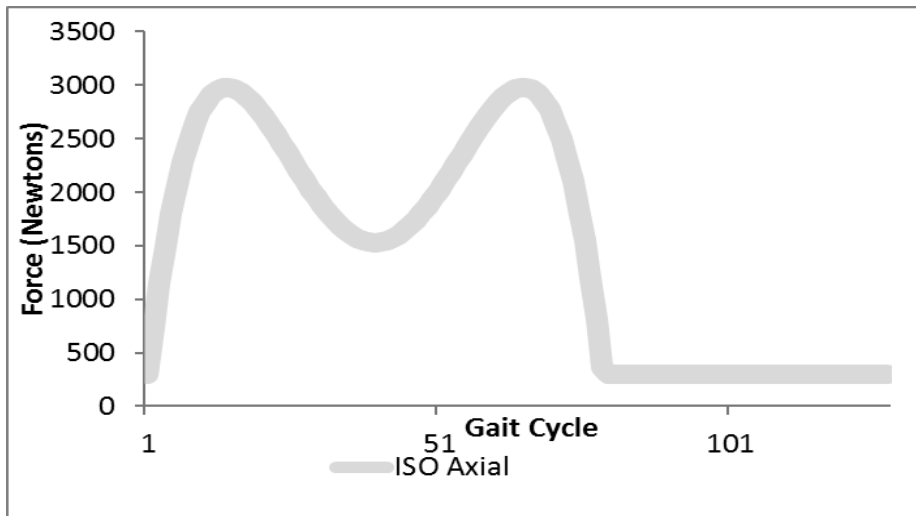

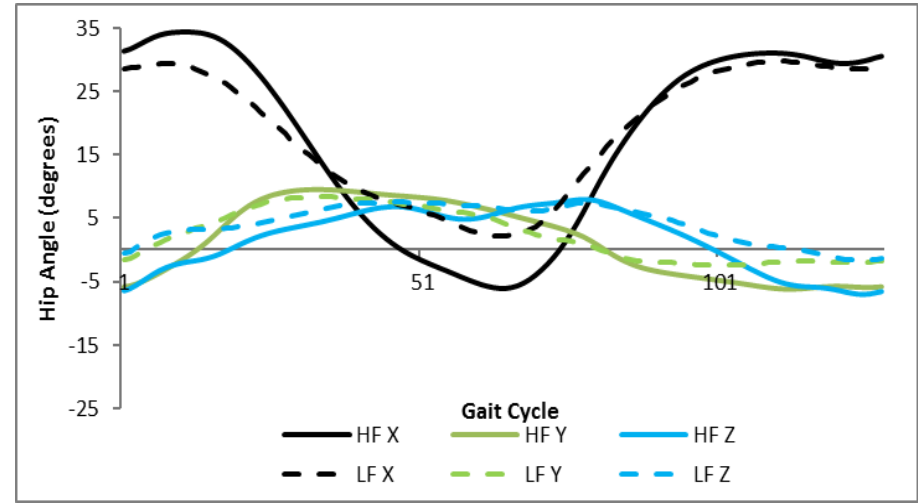

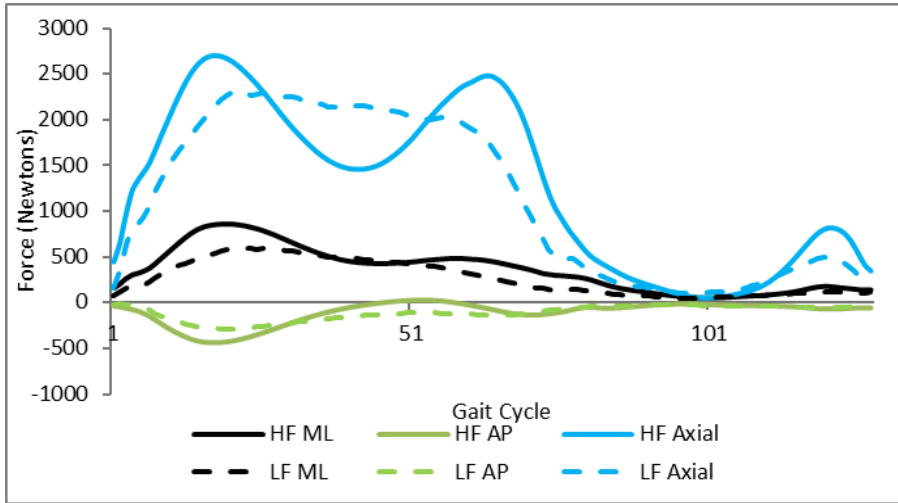

Wear volume 3-5 million cycles

15-22 mm³

55-66mm³

70-80mm³

Future Wear Testing- Patient Function

Conclusion

- Stratifying patients by demographic & biomechanical characteristics reveal differences in patient function
- Start to understand relationship between patient function and revision rate
- Help to avoid the ASR failure through improved preclinical testing

Data Release

- A large amount of data generated through this project (~3000 trials)
- First release-
 - 3 patients; 56 trials (walk, fast, ascent, descent etc)

-Data Access Walkthrough-

<https://doi.org/10.5518/345>

Data Release

- Future releases
- Data requests- d.lunn@leeds.ac.uk
- Keep updated via twitter
